Summary

I'm a passionate and results-oriented software engineer with 8 years of experience in the IT industry, specializing in full-stack development using Java, React, JavaScript, and basic SQL. I also bring 4 years of strong experience in Angular. My work spans across ERP product development, real-time dashboards, and internal enterprise tools.

I've built scalable web applications, including a recall dashboard using WebSockets for real-time data updates, and contributed to the Slack Governance Portal to streamline and secure collaboration. I've also led the development of NGO websites as part of social impact initiatives, and played a key role in building an internal intranet site that improved organizational efficiency.

Leadership is a core part of my journey — from mentoring peers to leading hackathon teams and delivering innovative, award-winning solutions. I've been recognized with spot awards and recently promoted to Member of Technical Staff in recognition of my contributions.

I'm driven by a passion for clean code, impactful products, and helping teams thrive through collaboration and creativity.
